

## Press Release

### Collaboration has now been sealed: **GOMULTIMODAL** and **LTW Intralogistics** agree on jointly developing concepts for more efficient intermodal terminals

[Hamburg, November 10<sup>th</sup>, 2016] The steadily rising volume of transportation in seaport and inland terminals requires the application of innovative technologies and more efficient process flows, particularly with regard to improving the economic use of available handling areas.

On this account, **GOMULTIMODAL GmbH** and **LTW Intralogistics GmbH** have concluded a collaboration agreement aiming at developing an innovative and highly automated concept for the storage of intermodal transport units (ITU) in high-bay warehouse (HBW) through the use of available automatic warehouse technologies.

The concept was first presented at the Terminal Day 2016 of the SGKV (German Promotion Centre for Intermodal Transport e.V.) by both companies. The transfer of freight from road to the more environmentally friendly rail and waterways as well as the realization of concepts in the field of city logistics should be supported by this collaboration.

“The long-term experience and profound knowledge of both companies in all areas of combined transport as well as intralogistics provide optimal conditions for a qualified and successful cooperation”, Gerhard Oswald, Managing Director of **GOMULTIMODAL** points out.

Throughout Europe, **GOMULTIMODAL** is the consulting specialist for national and international carriage by combined transport and seaport-hinterland road transport. The consultancy is intended for providers and users, for political institutions, associations and public bodies. Its range of services includes consulting, personnel management and company representation.

**LTW Intralogistics** as a full-service supplier, develops, manufactures and implements turnkey intralogistics systems worldwide – from uncomplicated mid-sized projects to fully automated logistics centers, from cold storage to a climate protection certified high-bay warehouse made of wood. Since its foundation in 1981, **LTW** has been a member of the Doppelmayr Group, the global market leader in ropeway systems.
